Lock the door on software robbers… for good!

Dear Hard-worker,

Don't you just HATE it when that happens?

You spend a ridiculous amount of time, effort and money developing the latest program.

It's gonna be big! You've spent a packet on advertising. But that doesn't matter, you're gonna make a fortune off this program! Everyone's gonna want it!

You release it, anxiously awaiting the figures.

But,

Instead you come across, spidering its way slowly but surely across the web, a jumped up version of YOUR SOFTWARE!

How could this happen? You ensured that security protection was incorporated into the program!

Unfortunately, this is a common occurrence on the web today. You work all day and all night for weeks to turn that ingenious idea into a functional program, only to have some freeloading hacker break your security protection and distribute pirated versions all over the place!

So how do you remedy this problem?

Well, if you're at this stage then sorry it's too late. You can't do diddly squat about it now.

If you haven't come across this problem…yet…then you are extremely lucky!

But sooner or later it WILL happen to you. All that hard work down the toilet. Are you willing to risk that?

Advance Software Lock 1.0 is a unique program that protects every possible doorway hackers may try, to gain access to sensitive areas of your software.

This program boasts the ability to convert any executable (.exe) application into a time limited product.

With the use of multiple protection and hacker-resistant methods, your software is guarded against malicious usage and debugging attempts, thereby preventing the production of identical warez.

But how is this program different to all the other security protection programs out there?

The problem with most security protection programs of today is they only provide a short-term solution. As soon as the hackers have figured out how to break in, hey presto! You've got an illegal copy of YOUR program floating around in cyberspace.

Advance Software Lock 1.0 provides the long-term solution to the problem of software robbers.

You can't unlock a door if there's no keyhole!

And that is effectively what this program does: fills in the keyhole!

Here's how:

- Virtually impregnable RC4 and Enigma encryption is used to provide flexible but incredibly sturdy security
- Generate unlimited serial numbers for maximum hacker resistibility
- File date changing system for time limited restrictions
- Hardware finger printing system is used, which detects the unique physical setup of the user and monitors its usage of your software
- Debugger detection, to detect any abuse of your software
- Offline registration
- Trial execution limiting capabilities
- Ability to generate three levels of key generation for maximum security
- Compatible with C++, VB, Delphi, other .exe applications and even ebooks!
- The program also features hidden traps to catch even the sneakiest of hackers
- Test program is included in order to determine the most suitable protection for your software

Advance Software Lock 1.0 is the ultimate prevention tool against today's software robbers.

With this master key, you can finally lock the door against the growing hacker community…for good!

Yours sincerely,

Mr Name

PS This program comes with the added bonus of Master Resell Rights, so you can also profit from selling it on to others!

PPS Advance Software Lock 1.0 provides many features that you will NOT find in any other security protection program of its kind.

PPPS Unfortunately, we have already experienced problems caused by developers of older security protection programs who wish to shut us down and tarnish our good name. Attempts to hijack this page have already been made. We, therefore, cannot guarantee that this page will still be here at a later date. To avoid disappointment, secure your copy of Advance Software Lock 1.0 now!
