Dear Health conscious reader,

FACT: Lack of Omega 3 kills more Americans every year than alcohol.

Yep. We've known for a while that taking Omega 3 is good for our health. And stats like these really hammer that message home.

So we make a conscious effort to start eating more fish, maybe start taking fish oil capsules.

Problem solved. Right?

Unfortunately, far from making things better, we're actually putting ourselves on the fast track to an early grave.

More on that in a minute...

I'm Issac and like many people, I knew taking Omega 3 supplements was supposed to be a good thing, I just didn't know why. I mean, what *exactly* is it supposed to do for us?

All I ever seemed to get from my fish oil capsules were nasty putrid fishy burps, stomach aches and some not too pleasant bowel upsets!

How can *that* be doing me any good? And where are these supposed health benefits?

But I know a few people who swear by their Omega 3 supplements. And you can actually see the benefits.

So what gives?

That was my cue to do a little digging...

What I discovered *shocked* me to the absolute core.

As soon as I found out the unbelievable truth, I threw my fish oil capsules straight into the trash in disgust.

Trust me, you will too.

Pharmaceutical and health companies started producing fish oil capsules soon after it was discovered that cultures such as the Inuit (Eskimos) live on a diet that is made up almost entirely of fish, yet despite such a huge intake of 'fats', their health is remarkably good.

We now know, of course, that it's thanks to those **Omega 3 oils** found in the fish they eat.

So **mass production** of Omega 3 supplements from fish oil began. And this is also where the danger lies...

In March 2010, lawsuits were filed against eight of the most popular Omega 3 supplement producers after it was discovered that some of the capsules' 'ingredients' can kill you!

Unbelievably, **the lawsuits were NOT filed by the FDA** – the very body that is supposed to raise flags to these kinds of issues – nope, the lawsuits were filed by an environmental consumer group.

Now *that* is scary.

And people, that's just ONE of the ways these supplements can kill you.

Heck, even just *eating* the fish can be hazardous to your health!

So what's a person to do? We want the health benefits of Omega 3 oils but we don't particularly fancy inadvertently *killing* ourselves trying to get them.

Well, I found a solution. And you can actually **see and feel the benefits!**

Two years ago, my wife gave me a bottle of gel pills saying 'take this every day, it is a good source of Omega 3'. Being a good husband, I just said yes dear and never even looked past the label to know what it was.

Finally, I wanted to know why I needed to add omega 3 to my diet. I came across Issac and Barb's ebook "Omega 3 Secrets" and learned everything I needed to know. They did a very detailed, yet easy to follow report of the history and benefits of Omega 3. I had no idea that I was improving my health in so many ways!
